Pggraph - Feature #4901

pggraph_table doesn't list tables

Description

If you go to the table graphing, it will not list the tables until you click show at least once. It would make sense to grab the table names on display of the page.

This is known functionality; the index one does the same. That it pre-populates the index table is considered a bug.

Loading 100+ tables for all datnames is not an ideal solution. Thoughts?

Going to do some dynamic form monkeying for this, using an AJAX-ish lib.

#3 - 12/30/2008 01:39 PM - bford -

Is this still relevant?

#4 - 12/30/2008 01:56 PM - anonymous -

I think so, we still don't dynamically load tables. Though we do, iirc, generate a different kind of list now.
