Description

We have the ability to see which relations did what type of dml for a given interval. However we don't have the ability to see that data database wide. What I would to see is on the database graph to have the option to select DML which would sum the n_tup_ins, n_tup_del and n_tup_update for all relations on the particular database and graph it based on the interval.

History

#1 - 12/26/2007 12:10 PM - Aurynn Shaw

so select inserts, updates, and deletes all summed together?

#2 - 12/26/2007 12:26 PM - Darcy Buskermolen

no, the way I read this is:

3 graphs respectively consisting of:
sum(n_tup_ins) where interval = foo;
sum((n_tup_del) where interval = foo;
sum(n_tupp_update) where interval = foo;
